PRODUCT VISION

🚀 VERSION A — PRODUCT VISION

Product Name: **AI-Assisted Hiring Operations Platform**

Vision

Hiring today is inefficient, inconsistent, and stressful for both companies and candidates.

Recruiters are overloaded. Hiring managers lack visibility. Panel members struggle with structured feedback. Candidates often experience silence and uncertainty.

Our vision is to build:

> **An intelligent hiring operations system where AI handles repetitive, time-consuming tasks, while humans retain full decision control.**

This platform is not designed to replace recruiters — but to **amplify their effectiveness**, reduce operational friction, and create a predictable, transparent hiring experience.

Problem We Are Solving

Modern hiring suffers from:

• Manual JD creation
• Resume overload
• Inconsistent screening
• Poor candidate communication
• Interview coordination chaos
• Feedback bottlenecks
• Candidate drop-off
• Lack of pipeline visibility

Companies spend enormous effort on tasks that can be intelligently assisted.

Our Approach

We introduce AI where it delivers **maximum practical value**:

✔ JD generation
✔ Resume parsing & matching
✔ AI-led pre-screening
✔ Structured feedback assistance
✔ Communication automation

While ensuring:

> **AI assists → Humans decide**

Core Philosophy

• AI is an assistant, not a decision maker
• Companies own hiring decisions
• System improves efficiency, not replaces judgment
• Candidate experience improves via communication clarity
• Data privacy & tenant isolation are fundamental

What Makes This Product Special

Unlike traditional ATS tools, this platform:

🔥 Reduces recruiter workload via AI assistance
🔥 Eliminates resume screening chaos
🔥 Introduces AI pre-screening calls
🔥 Fixes feedback inconsistency
🔥 Solves candidate ghosting through communication engine

Candidate Experience Vision

Candidates should never feel lost or ignored.

They receive:

✔ Predictable updates
✔ High-level application visibility
✔ Clear process signals

Without exposing sensitive internal evaluations.

Long-Term Vision

We aim to build the **operating system for hiring workflows**, adaptable across industries, roles, and organization sizes.

FUNC. & OP. OVERVIEW

🏢 VERSION B — FUNCTIONAL & OPERATIONAL OVERVIEW

---

1. Product Definition

The platform is a **multi-tenant SaaS hiring operations system** designed to assist organizations in managing end-to-end recruitment workflows with AI-powered enhancements.

The system improves:

✔ Efficiency
✔ Consistency
✔ Visibility
✔ Candidate communication

---

2. Target Users

Primary Users

• Organization Admin
• HR / Recruiters
• Hiring Managers
• Interview Panel Members

Secondary Users

• Candidates (limited interaction scope)

---

3. System Architecture Principle

The platform follows a **strict multi-tenant model**.

✔ Each organization operates in an isolated environment
✔ No cross-organization data sharing
✔ Candidate records are tenant-scoped
✔ Role-based permissions enforced

---

4. High-Level Workflow

STEP 1 — Position Creation & JD Generation

User Inputs:

• Role Title
• Experience Range
• Skills
• Budget
• Location
• Employment Type

System:

✔ AI generates Job Description
✔ User can edit / refine

Purpose: Reduce manual JD effort & standardize descriptions.

STEP 2 — Candidate Acquisition

MVP Methods:

✔ Resume Upload
✔ CSV Import
✔ Manual Entry

Future Expansion:

• Portal integrations

Purpose: Controlled, reliable candidate intake.

STEP 3 — Resume Parsing & Match Analysis

System:

✔ Extracts structured data
✔ Computes Match Score
✔ Identifies skill alignment & gaps

Purpose: Improve screening efficiency & recruiter decision support.

STEP 4 — AI Pre-Screening

System:

✔ AI bot conducts structured screening
✔ Captures:

• Experience
• Expected CTC
• Notice Period
• Availability
• Preferences

Output:

✔ Screening Summary
✔ Transcript / Recording

Purpose: Reduce recruiter screening workload.

STEP 5 — Recruiter Decision

Human Decision Point:

✔ Proceed to Interview
✔ Reject Candidate

Purpose: Maintain human control.

STEP 6 — Interview Management

MVP:

✔ Manual scheduling
✔ Round definition
✔ Panel assignment

System Tracks:

✔ Round type
✔ Date / Time
✔ Status

STEP 7 — Feedback Collection

Structured Feedback Model:

✔ Skill Ratings
✔ Strengths
✔ Concerns
✔ Recommendation

Optional:

✔ AI-Assisted Feedback Drafting

Purpose: Standardize evaluation quality.

STEP 8 — Candidate Status Engine

Rules:

✔ Default → In Progress
✔ Any Round Rejected → Rejected
✔ All Rounds Cleared + Manual Action → Selected

Purpose: Predictable pipeline behavior.

STEP 9 — Communication Automation

System Triggers:

✔ Status Updates
✔ Rejection Closure
✔ Interview Notifications
✔ Offer Stage Communication

Purpose: Eliminate candidate ghosting & improve experience.

STEP 10 — Offer Management

Organization Provides:

✔ Offer Template

System:

✔ Replaces placeholders
✔ Generates final offer

Purpose: Maintain legal safety & flexibility.

---

5. Candidate Experience Model

✔ No global candidate account
✔ Access via magic links / secure entry
✔ High-level status visibility only

Visible Information:

✔ Role
✔ Status
✔ Timeline
✔ Interviews
✔ Documents

Not Visible:

❌ Internal feedback
❌ Scores
❌ Evaluation notes

---

6. Candidate Duplication Handling

Within organization only:

✔ Email / Phone detection
✔ Existing record alert
✔ Resume update support

Purpose: Prevent database clutter & enable talent rediscovery.

---

7. Roles & Permissions

Organization Admin

✔ Full access
✔ User management
✔ Template configuration

HR / Recruiter

✔ Candidate management
✔ Workflow control

Hiring Manager

✔ Position & candidate visibility

Panel Member

✔ Assigned interviews only
✔ Feedback submission

Candidate

✔ Limited application visibility

---

8. AI Responsibilities

AI is restricted to:

✔ Content generation
✔ Data extraction
✔ Analytical assistance
✔ Conversational screening
✔ Feedback drafting support

AI is NOT responsible for:

❌ Hiring decisions
❌ Autonomous rejection

---

9. Key Differentiators

✔ AI JD Generator
✔ Resume Intelligence Engine
✔ AI Pre-Screening Calls

✔ Structured Feedback System
✔ Communication Automation Engine

---

10. MVP Scope

Included

✔ Position Management
✔ JD Generation
✔ Resume Parsing
✔ Match Scoring
✔ AI Screening
✔ Interview Tracking
✔ Feedback System
✔ Status Engine
✔ Communication Automation
✔ Offer Templates

Excluded (Future Phases)

❌ Deep job portal integrations
❌ Autonomous scheduling AI
❌ Background verification automation
❌ AI hiring decisions

---

11. Strategic Value Proposition

The platform improves:

✔ Recruiter productivity
✔ Hiring visibility
✔ Evaluation consistency
✔ Candidate communication
✔ Pipeline efficiency

While preserving:

✔ Human decision authority
✔ Data privacy
✔ Organizational control

UX Screen Spec's

UX Screen Specifications

This document describes the functional behavior, UI structure, user intent, and interaction logic for each screen in the system. The goal is to provide a low-fidelity but highly detailed blueprint that product, design, and engineering teams can use for visualization, validation, and implementation planning.

SCREEN 1 – LOGIN / AUTHENTICATION

Purpose

Enable secure access using phone-based OTP authentication.

Primary User

Recruiters / HR / Admin

UI Components

- App Logo (centered)
- Welcome Text / Tagline
- Country Code Selector (dropdown)
- Phone Number Input Field
- Primary CTA: Send OTP

Interaction Logic

1. User selects country code (searchable dropdown).
2. User enters phone number.
3. Validation rules:
    - Format validation (not length-only).
    - Country-aware validation.
4. On "Send OTP":
    - Trigger OTP workflow.
    - Show loading state.
    - Navigate to OTP Screen.

Edge Cases

- Invalid number → Inline error
- OTP failure → Retry mechanism

SCREEN 2 – DASHBOARD / INTERVIEW MANAGEMENT

Purpose

Allow recruiters to filter, search, and manage interviews.

Primary User

Recruiters / HR

UX Principle

Filtering must feel lightweight and flexible.

UI Components

- Header (Page Title + Actions)
- Candidate Dropdown (searchable, optional)
- Position Dropdown (searchable, optional)
- Date Filter
- Interview List Table / Cards

Filtering Logic

Independent filters:

- Candidate (optional)
- Position (optional)
- Date (optional)

Users may combine filters freely.

List Item Structure

Each Interview Card / Row:

- Candidate Name
- Position
- Interview Stage
- Date & Time
- Status Indicator
- Actions (View / Reschedule / Cancel)

Empty States

- No interviews → Friendly placeholder message

SCREEN 3 – APPLICATION DETAIL VIEW

Purpose

Provide deep visibility into candidate profile.

UI Components

- Candidate Header (Name + Position + Stage)
- Resume Viewer
- Candidate Summary
- Activity Timeline
- Actions Panel

Information Displayed

- Resume
- Skills
- Experience
- Interview History

Information Hidden (Role Sensitive)

- Salary Expectations (restricted)
- Internal Notes (restricted)

SCREEN 4 – INTERVIEW SCHEDULING

Purpose

Enable structured interview creation.

UI Components

- Candidate Selector
- Panel Member Selector
- Date & Time Picker
- Interview Type Selector
- Notes Field
- CTA: Schedule Interview

Logic

1. Validate participant availability.
2. Prevent scheduling conflicts.

3. Generate invitations.

SCREEN 5 – PANEL MEMBER SELECTION

Purpose

Assign interviewers efficiently.

UX Goal

Speed + Clarity

UI Components

- Searchable Panel List
- Role / Skill Tags
- Availability Indicators

Logic

- Multi-select allowed
- Conflict warnings

SCREEN 6 – INVITATION PREVIEW

Purpose

Allow recruiter to verify communication.

UI Components

- Email Preview
- Editable Sections
- CTA: Send Invitation

Logic

- Magic link generation
- Calendar integration

SCREEN 7 – CANDIDATE INTERVIEW INVITATION

Purpose

Provide candidate-facing clarity.

Displayed

- Interview Details
- Instructions
- Join Links

SCREEN 8 – PANEL MEMBER FEEDBACK ACCESS (MAGIC LINK)

Purpose

Allow frictionless feedback submission.

UX Principle

Zero-login experience.

Access Flow

Invitation → Magic Link → Feedback Screen

UI Components

- Candidate Name + Position
- Resume Viewer
- Feedback Form
- Submit CTA

Visible Information

- Resume
- Interview Context

Hidden Information

- Salary / Compensation
- Phone / Sensitive Data

Logic

- One-time secure link
- Autosave drafts

SCREEN 9 – FEEDBACK SUBMISSION

Purpose

Structured evaluation capture.

UI Components

- Rating Fields
- Text Feedback
- Recommendation Selector

SCREEN 10 – FEEDBACK SUMMARY

Purpose

Help recruiter decision-making.

Displayed

- Aggregated Ratings
- Panel Insights

SCREEN 11 – AI CONFIGURATION PANEL

Purpose

Control AI-driven behaviors.

Control Distribution

Admin Controls

- Screening Question Templates
- Global Communication Rules

- System Defaults

Recruiter / HR Controls

- JD Tone
- Screening Configuration

Panel Controls

- Feedback Style

UX Principles

- Avoid over-centralization
- Role-aware settings visibility

SCREEN 12 – SYSTEM SETTINGS

Purpose

Operational governance.

UI Components

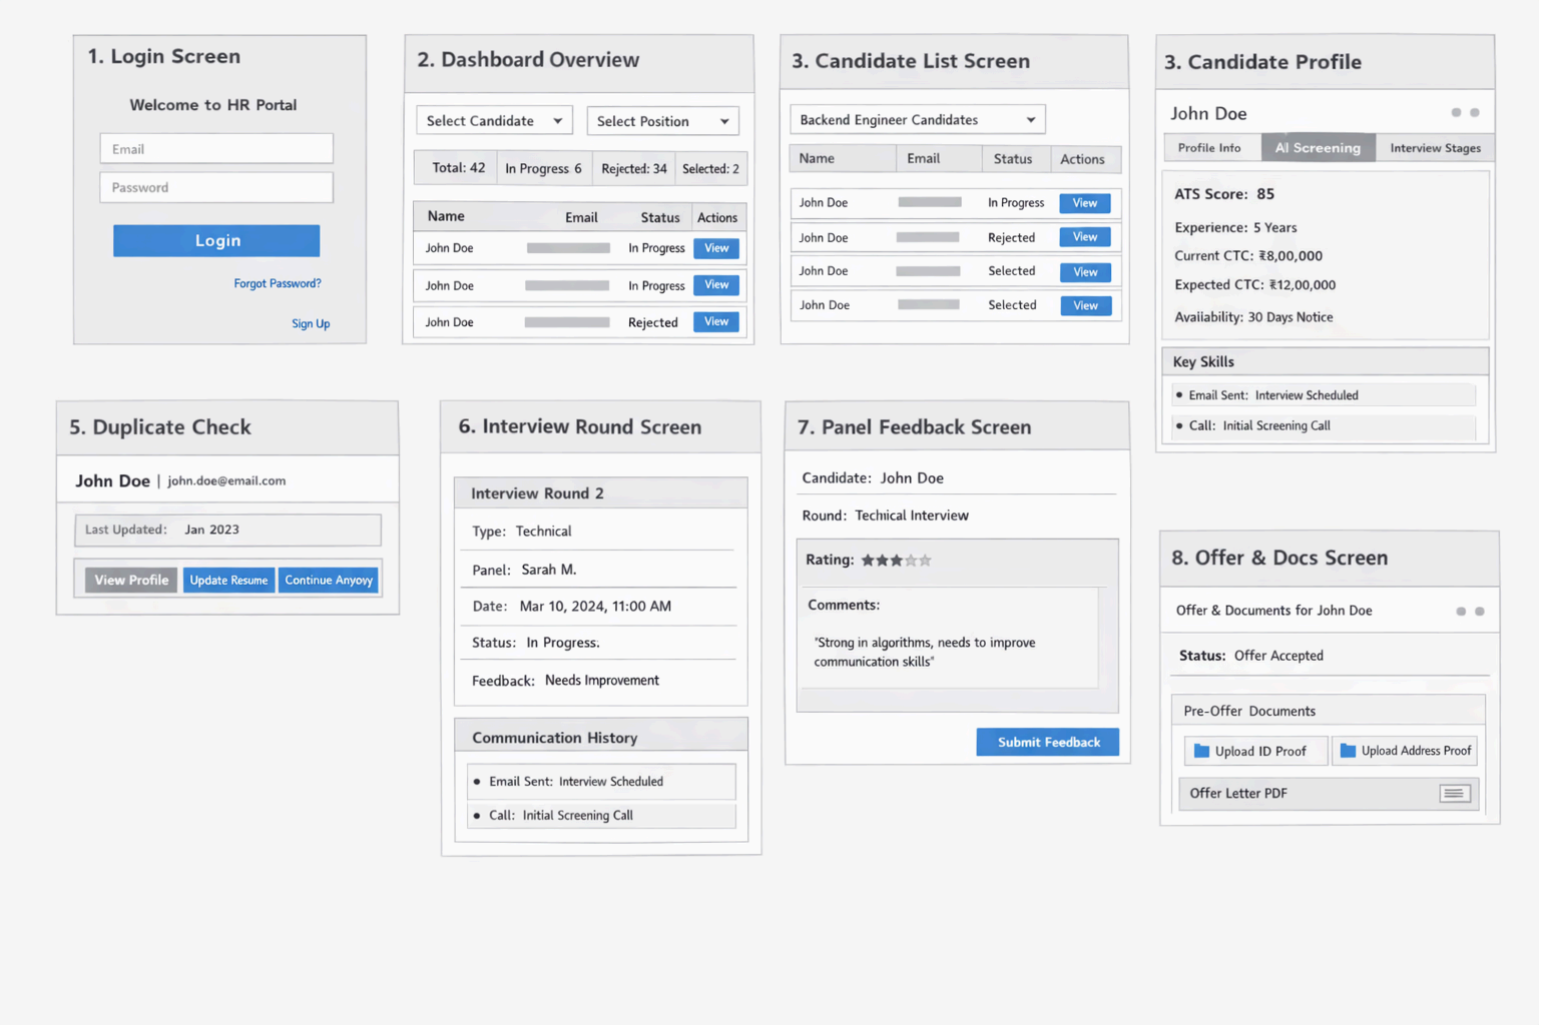
- Permissions
- Notifications
- Integrations

SCREEN 13 – ERROR / EDGE STATE HANDLING

Purpose

Graceful recovery from failures.

Examples

- Network Failures
- Expired Links
- Access Denied


Wireframe-style visuals
